#### **DETAILED ACTION**

### Specification

 Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

## Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Application/Control Number: 09/940,924

Art Unit: 3627

3. Claims 1-3, and 9-11 are rejected under 35 U.S.C. 102(e) as being anticipated by Miida et al. (2002/0049839 A1).

Miida et al. discloses the claimed method and system of managing consumer goods used in an analyzer (via center 100) with the steps of: monitoring consumption status of consumer goods (via number of read or copied papers) consumed by an analyzer (center 100) and receiving the information on consumption status (via information collecting/providing system), analyzing the consumption status of consumer goods used in an analyzer according to consumer goods supplier and according to consumer goods that the consumer goods suppliers deal in (via a communication control unit 11; see page 6, box 0154), and transmitting the analyzed consumer goods consumption status (via transmission device 400) or supply management information based on the consumer goods consumption status to a management unit (via control unit 20) for the analyzer or consumer goods suppliers' supply management units (see page 10, box 251).

### Claim Rejections - 35 USC § 103

- 4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Application/Control Number: 09/940,924

Art Unit: 3627

5. Claims 4-8 and 12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Miida et al.

Miida et al. discloses the elements of the claimed invention, but fails to explicitly disclose monitoring consumption status requesting payment from an analyzer administrator, consumer goods suppliers or a consumer goods vendor for use of the information being monitored. However, it is old and well known in the business technology to charge a transaction fee for service provided. It is would have been obvious to one of ordinary skill in the art at the time the invention was made to have including requesting payment by the communication network in order to provide status information representing consumption used and for replenishments, and the examiner takes Official Notice as such.

As per claims 5-8, Miida et al. discloses all the structural elements of the claimed invention except for managing reagent used. However, it would have been an obvious matter in the art to modify the managing of consumer goods as taught by Miida et al. since such a modification would have involved a mere change in the type of goods or component being analyzed.

#### Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Kawashima et al. discloses a system that automatically order goods and having a condition diagnostic unit.

Art Unit: 3627

Haluska discloses a controller system that controls and tracks information related to business transactions between a provider and a receiver.

Zugibe discloses an analyzer for determining a quality and quantity of refrigerant, and an accounting system for determining a value of analysis.

Watson et al. discloses a sample distribution system.

Business Center (EBC) at 866-217-9197 (toll-free).

7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Lynda Jasmin whose telephone number is (703) 305-0465. The examiner can normally be reached on Monday- Friday (8:00-5:30) alternate Fridays off.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Robert P Olszewski can be reached on (703) 308-5183. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic

rimary Examiner
